SHOE FRESH

Shoe Sterilising Spray

For the Control of Athlete's Foot (Tinea Pedis) in Footwear

SHOE FRESH is for use on Footwear only & must not be sprayed onto the skin

What is Athlete's Foot?

Athlete's foot is a common fungal infection. It can make the skin between your toes flaky and itchy. The fungus that causes athlete's foot is a spore that can survive for up to 2 years. The fungus thrives in conditions that are moist, warm and dark. Therefore shoes and footwear are the ideal environment for reproducing the bacteria.

Anyone can get athlete's foot. About 1 in 7 people in the UK have it at any one time.

Causes

There are several dermatophytes that can cause athlete's foot. The most common is trichophyton rubrum. These fungi live on human skin and may be present without you being aware of it. However, under certain conditions the fungi are able to multiply and cause infection, in warm enclosed environments e.g. between your toes.

Athlete's foot is contagious and can be spread through direct contact, through a cut or abrasion of the foot or indirectly through footwear, towels, the floor etc.

Treatment

Go to your pharmacist who can recommend a suitable treatment or alternatively see your doctor .

*To help control ATHLETE'S FOOT from spreading through footwear usage
Applying SHOE FRESH to your footwear will act as a controlled PREVENTATIVE
SHOE FRESH is the answer to stop cross-infection taking place & is a proved
& effective way of dealing with the problems associated with footwear which is in
constant communal use, i.e. bowling alleys, ski centres, ice rinks, or anywhere
where footwear is hired or loaned out.*

SHOE FRESH

Shoe Sterilising Spray

For the Control of Athlete's Foot (Tinea Pedis) in Footwear

SHOE FRESH is for use on Footwear only & must not be sprayed onto the skin

Shoe Sterilising Spray

**BACTERICIDAL - FUNGICIDAL - SANITIZER - CONTROLS
MILDEW - MOULD - FUNGI - is NON - STAINING
LONG LASTING PEACH & JASMINE FRAGRANCE**

SHOE FRESH has been specially designed to control the problems which are associated with athlete's foot and mal-odour.

The use of simple masking from perfume sprays has not proved to be an effective way of dealing with the problems associated with footwear which are in constant communal use, such as in bowling alleys, ski centres, ice rinks, or anywhere where footwear is hired or loaned out.

Shoe Sterilising Spray
**BACTERICIDAL - FUNGICIDAL - SANITIZER - CONTROLS
MILDEW - MOULD - FUNGI - is NON - STAINING
LONG LASTING PEACH & JASMINE FRAGRANCE**

In the late 80's we supplied a quality air freshener to a local bowling alley, they were pleased with the performance of the product & when re-ordering explained that they were using it for spraying into the bowling shoes that they hired out. The only problem that they found was that it was taking several hours to dry off.

We then looked into the possibility of a product to meet the market needs. The frequent usage of footwear eventually causes unpleasant odours to form, primarily as a result of bacterial decomposition of the sweat produced by foot sweat. Footwear is thus the ideal breeding ground for bacteria along with the fungicidal problems which spread infections such as TINEA PEDIS (Athlete's Foot).

The use of simple masking from perfume sprays (air fresheners) has not proved an effective way of dealing with footwear which is in constant communal use, such as in Bowling Alleys, Ski Centres, Ice Rinks, Training Colleges etc. or anywhere where footwear is hired or loaned out.

The result was that we developed "*SHOE FRESH*" Shoe Sterilising Spray to control the problems which are associated with Mal - Odour & Athlete's Foot.

SHOE FRESH contains a BACTERICIDAL agent which controls the presence of bacteria associated with Mal - Odour which is absorbed into the texture of the footwear.

SHOE FRESH also contains a Fungicidal which controls the problems which spread infections such as TINEA PEDIS (Athlete's Foot).

SHOE FRESH is Non - Staining & has a long lasting PEACH & JASMINE fragrance.

SHOE FRESH is both fast acting & quick drying, simply shake can well before use, to disinfect and sterilize, spray several short bursts into the footwear & allow to dry off.
